

JUST-IN-TIME PRINTER DISCOVERY AND DRIVER INSTALLATION SYSTEM AND METHOD

ABSTRACT OF THE DISCLOSURE

5

A method, logic and computer system for determining information regarding at least one printer available to receive a print job from a client computer. A query is transmitted from the client computer to a server via a network for an identification of the at least one available printer. An identification of the at least one available printer is received from the server. A file is downloaded from the server, the file being used to support printing to a selected one of the at least one available printer.
